EPSON®
EXCEED YOUR VISION

Epson EH-TW9000W

Ultimate HD cinematic experience: Watching the latest Hollywood blockbusters will be a whole new experience with the EH-TW9000W. Harnessing Epson's latest technology, this 1080p Full HD projector provides superb high quality images, rich, deep blacks and delivers an impressively high 200,000:1 contrast ratio. All this is enhanced by Epson's 3LCD technology for projections with the most vivid, natural colours you'll see outside of a multiplex cinema. Frame interpolation ensures fast moving action scenes during films are smooth and fluid.

The only projector available with WirelessHD, this FullHD home cinema projector like no other. Its huge contrast ratio of 600,000:1 keeps 2D and 3D images looking crisp and true, with deep blacks, pure whites, and rich colours delivered by Epson's 3LCD technology.

3M Wall Mounted Projector Screen

Although it is difficult to convey the screen quality . The triple laminated glass fibre surface is designed to lay flat with no curls extending into the viewing area. The gain is 1:1 which we consider best for modern projectors which have plenty of brightness. The viewing angle is very wide and the black border all around marks the image and improves your perception of the contrast ratio.

DLS Speakers

Accommodating most speakers can be a real issue - especially with surround sound systems. With this in mind, DLS created the Flatbox speaker range. As the name suggests, these are extremely thin speakers that can easily be wall mounted and have a total depth that's little more than a typical flatscreen TV. Fitting the speakers is easy, with just a single mounting point required. All the speakers can be hung vertically or horizontally. Available in satin white or piano black (additional cost) you can choose the finish. You also get a choice of black or white speaker grilles, letting you choose between the speaker blending in or becoming a feature in its own right.

UNCOMPROMISED SOUND QUALITY

What really marks the DLS Flatbox speakers out is, despite their compact depth, they manage to sound remarkably good, too. With hundreds of hours of development time, these speakers really do make the most of their dimensions. Even the smallest Flatbox speaker uses hi-fi grade speakers, with a separate soft dome tweeter and paper/wool woofer for the dynamic response you'd expect from a proper two-way speaker. The bass reflex design ensures the speakers present an efficient load to your amplifier.

Superior audio quality 7.2-channel 95w x 7 Wi-Fi Built-In Network AV Receiver supports the latest HDMI version and offers 4K upscaling, HDMI Zone B for flexible system setup, high-grade aluminium front panel and the world's most advanced features, including CINEMA DSP 3D and YPAO Volume.

BD-S677

Offering Miracast™ and advanced network functions, this is a highly versatile Blu-ray 3D™ player. It's compatible with the Yamaha smartphone/tablet control app and Dropbox™, and features a design matched to Yamaha AV Receivers.

Small AV Rack

This rack mount enclosure is 12U in height (534mm approx). The rack enclosure has front and rear rack rail, and a rackable depth of 480mm.

This unit will be available with a vented door as well as Castors.

Projector Wall Mount

UNIVERSAL SHORT THROW PROJECTOR MOUNT

- * 535-1350mm throw distance
- * 25kg max weight load
- * +/- 5° tilt
- * 100mm height adjustment
- * Integrated cable management and spirit level
- * 400x400mm maximum fixing points
